

Dip sterilizable
entertainment handset

AUSTCO's emphasis is to ensure its emergency call systems will entirely satisfy the demands of extended care retirement villages, nursing homes, hostels and hospitals.

AUSTCO has developed a multi-function entertainment handset that controls the patient's TV, radio, speech communications, music, lights and nurse call functions.

The ergonomic design has been specifically developed with the patient in mind and shows the expertise that earned AUSTCO an Australian Design Award.

Its user-friendly shape fits comfortably in the patient's hand and allows easy thumb and finger access to the control buttons.

AUSTCO's range of silicon call points

Designed with a silicon touch pad button and back light, AUSTCO's call points feature a subtle glow that allows for easy finding in darkness without any irritation to sleep.

Fully compatible with Australian, North American and English size electrical wall boxes, the super sensitive touch pad only requires the slightest pressure anywhere on the button's surface to activate the gold plate contact pads. This makes it so easy for disabled patients or frail aged residents to operate, especially those with arthritis.

When pressed, the call point cancel button glows red, assuring the patient that the call has been placed. There is also the option of an audible reassurance.

AUSTCO

For excellence in emergency and nurse call systems

Contemporary hospital nurse call system

LightCom

*Improving the
tradition of
nurse call*

LightCom

A cost effective traditional nurse call system based on solid state electronic technology to provide a comprehensive range of easy to use call points for prompt and efficient patient care. System features include clear audio-visual active call indication to nurses via centrally located annunciator panels and optional nurse-patient two-way capabilities.

LightCom

LightCom is specifically designed with the patient in mind to provide an easy to use audio visual nurse call system that is cost effective and simple to install in hospitals, clinics and day surgeries.

LightCom features AUSTCO's extensive range of flush mountable call points, with easy to identify soft touch silicon push buttons, as well as pendants for patients to activate calls. Water resistant call points and pull cords are available for use in toilets, wash rooms and other wet areas.

The location and level of an active call is clearly displayed to nurses on over door lights, zone lights as well as on optional Annunciator Panels centrally located at nurse stations.

Over door and zone lights use different colour indicators, with or without flashing, to indicate the priority of active calls.

The Annunciator panel audibly and visually announces active calls at two distinct levels for each bed, room or zone connected to it.

Optional two-way speech (talk-back) communication between nurses and patients ensures a totally appropriate response to calls resulting in increased staff efficiency and patient care.

AUSTCO's innovative ergonomically designed entertainment handset for patient control of TV, radio, lights and nurse call functions is a further feature.

System Standards:

- Designed to comply with
- AS 3811 Hard-wired patient alarm systems for hospitals.
 - HTM Bedhead services (U.K.)
 - BS EN 60601.1, CSA 601-1-M90 & UL 2601.1 Medical Electrical Equipment General Requirements for Safety.

Manufactured in general accordance with the requirements of international quality assurance standard ISO9002.

The many advantages of Austco LightCom...

- Operationally user friendly.
- Ensures absolute staff confidence and patient security
- Attractively styled, versatile, dependable and reliable.
- Easy and economical to install.
- Very easy to expand and interface.
- Two-way nurse to patient speech ("talk-back") option with public address
- Contemporary modular design
- Solid state technology significantly reduces maintenance costs.
- Spares available at very competitive pricing that allows configuration to other light and buzzer systems.

Company Profile

AUSTCO Communications, established in 1985, is recognised as a world leader in the design and manufacturer of emergency call and care management systems.

Based in Perth, Western Australia, AUSTCO has established an Australia-wide network of highly trained resellers as well as dedicated offices in Sydney, South East Asia, New Zealand, the Middle East, Canada, North America, United Kingdom, and Latin America. It now provides call systems to facilities throughout the world.

Across the globe, there are thousands of our installations providing essential communications, saving lives and providing support to those in need.

Our systems are easy for patients to operate, unobtrusive and aesthetically pleasing.

AUSTCO's design and software engineers, programmers and technical staff produce state of the art equipment and the company's research and development is at the leading edge of communication technology in the healthcare market.

AUSTCO works closely with its clients, ensuring exceptional levels of service in custom design and specification to entirely satisfy the demands of hospitals, retirement villages, aged care facilities, hostels and high care secure accommodation.
